

REQUIREMENT ANALYSIS

Proposed System

The proposed Leave Management System automates the complete Employee Leave Request process using the ServiceNow platform. The system provides a centralized environment where employees can submit leave requests, managers can review and approve requests, and administrators can monitor leave activities through dashboards and reports.

The system minimizes manual intervention, reduces approval delays, improves transparency, and ensures accurate leave record management through workflow automation.

Proposed Workflow

Employee

Leave Request Submission

Request Record Created

Manager Approval

Status Update

Dashboard Tracking

Key Features

- Online leave request submission
- Automated approval workflow
- Automatic leave duration calculation
- Client-side validation
- Real-time status tracking

- Dashboard and reporting
- Centralized leave record management
- Automated notifications

Functional Requirements

Functional requirements describe the specific functions and operations that the system must perform.

Employee Leave Request Submission

The system shall allow employees to submit leave requests through an online form.

Inputs

- Employee Name
- Employee ID
- Department
- Leave Type
- Start Date
- End Date
- Reason for Leave

Request Storage

The system shall store all submitted leave requests in the Leave Request table for future reference and reporting purposes.

Approval Workflow

The system shall automatically route leave requests to the reporting manager for approval using Flow Designer.

Approval Decision

The manager shall be able to:

- Approve Request
- Reject Request
- Review Request Details

Leave Duration Calculation

The system shall automatically calculate the total number of leave days based on the selected start date and end date using a Business Rule.

Client Validation

The system shall validate leave request information before submission and prevent invalid entries.

Validation Rules

- End Date cannot be earlier than Start Date
- Mandatory fields must not be empty
- Leave dates must be valid

Notification Generation

The system shall automatically generate notifications during various stages of the leave process.

Notification Events

- Leave Request Submitted
- Leave Request Approved
- Leave Request Rejected
- Status Updated

Status Management

The system shall automatically update the leave request status based on the manager's decision.

Status Values

- Pending
- Approved
- Rejected

Dashboard Reporting

The system shall provide dashboards and reports for monitoring leave activities.

Dashboard Metrics

- Total Requests
- Approved Requests
- Rejected Requests
- Pending Requests
- Leave Requests by Department
- Monthly Leave Statistics
- Employee Leave Trends

Non-Functional Requirements

Performance

The system shall process leave requests efficiently and provide quick response times.

Reliability

The system shall maintain accurate leave records and ensure data consistency.

Usability

The application shall provide a simple and user-friendly interface for employees, managers, and administrators.

Security

Only authorized users shall be allowed to access and manage leave request information.

Scalability

The system shall support increasing numbers of users and leave requests without affecting performance.

Availability

The system shall be available to users whenever required and provide uninterrupted access to leave management services.
